

## **Fortis Hospital launches unique Drive-In-Clinic; a first in NOIDA**

❖ *Minimizes chances of COVID19 infection who is availing OPD services*

**NOIDA, 26<sup>th</sup> May 2020:** In a unique initiative to enhance patient safety, **Fortis Hospital** launched a first-in-its-kind Drive-in-Clinic here today. The drive-in concept helps patients to do all the necessary activities like consulting a doctor, providing samples, collecting medication etc. without entering hospital building. The concept is an innovative attempt to provide clinical solutions to the patients without having to enter the hospital building. This is the first time any hospital in NOIDA has launched a Drive in Clinic. The appointment for the drive in clinic can be pre-booked through telephone, website or through Fortis App.

While approaching the drive in clinic, the patients will wait in their vehicles while maintaining a 10-meter distance. At the designated time of the OPD, only the patient will be dropped at the clinic for evaluation by the doctor and will prescribe necessary treatment. Within this set up, the samples for testing shall be collected as well as medications shall be provided. All these will be done in this drive in clinic without having to enter the hospital building even once. All necessary safety protocols & mechanisms have been put in place.

Speaking on the launch of this unique clinic, **Mr Hardeep Singh, Zonal Director, Fortis Hospital, NOIDA** said, *“Our endeavour is to strive towards greater patient safety norms always. During these times of COVID19, it is even more relevant. The idea behind this unique clinic is to contain any potential exposure even while providing emergency consultation. This is going to be especially helpful in protecting the vulnerable population like older adults, young infants, pregnant ladies as well as anyone with a compromised immunity. They can now avail treatments through these secure clinics.”*

There is an acrylic partition between the patient and the consultant, measures to ensure good ventilation and air circulation in the clinics have been taken. Hand sanitizers and masks have been made available for the patients. Disinfection and cleaning processes are undertaken after each patient leaves the drive-in-clinic.
